A survey of villages of Bhabar tract of Garhwal region was done to identify medicinally important plants used by local peoples of that region. The paper deals with 393 plant species described by local peoples including- Boxas, Gujjars, Ayurvedic practitioners, herbal vendors, Vaidyas used for different diseases. The study was conducted between 2006 to 2008.

**Keyword:** Medicinal plants, Phytodiversity, Bhabar region, Garhwal Himalaya.

### 1. Introduction

Himalaya has been a continuing treasure of medicinal phytodiversity, since a long antiquity as many plant species of this area have medicinal value and were being used by local people or curing various diseases and to maintain their health. Garhwal Himalaya, due to varying topography has many remote area and in the absence of proper communications their health care system was totally based on indigenous uses of plants or Vaidyas which were not school based Doctors but their practice was based on knowledge inherited to them from their forefathers.

The present survey was undertaken in the Bhabar tract of Garhwal. In Garhwal region, Bhabar extends from 78° 22' E longitude to 78° 32' E longitude and 29° 43' to 29° 48' N latitude, occupying 4320.403 hectare area in Terai region. Extending from northwest to Southeast, the whole tract is about 132 km in length having the minimum and maximum width of 0.5 km and 6.0 km respectively. It is occupied by 48 villages. Its population in 1981 was 54,312.

Being located between the 'Siwaliks' and the 'Terai' zones, the bhabar tract has its own history. Infact, this narrow tract of bhabar remained afforested until recently and most part of its past history is still untold. The tract is named as "Bhabar" on the basis of grass "Bhabar" (*Eulaliopsis binata*) which dominates the area.

Bhabar region having the inhabitants of mixed culture as they have the impact of hills as well as plains on one hand and ethnic groups like Boxas, Gujjars on other hand. Inspite of having some government dispensaries and being near Kotdwara, its health care system is regulated upto some extent by the direct uses of plants by Ayurvedic practitioners, herbal vendors, Vaidyas and ethnic groups.

Various contributors have worked on phytodiversity of Garhwal Himalaya. Some of them are- Hooker, (1872), Kanjilal (1928), Duthie, (1960), Babu, (1977), Raizada and Saxena (1978), Jain and Puri (1984), Naithani (1984 & 1985), Agarwal, (1983), Polunin and Stainton (1984), Stainton (1988), Kharwal and Sharma, (1990), Negi and Pant (1991), Ghildiyal

and Srivastava, (1995), Purohit (1997), Ghildiyal *et.al.*(1999), Gaur (1999), Singh and Prakash (2002), Rana *et.al.*(2003), Bisht and Ghildiyal (2007), Ghildiyal *et.al* (2008).

## 2. Materials and Methods

The present study has been conducted in two steps:

**2.1-** A survey was made in different villages of Bhabar region of Garhwal Himalaya. Local inhabitants particularly old persons were consulted for the ethnobotanical uses of the plants. Fig.-1. India map showing Uttarakhand State and Fig.-2, Uttarakhand map showing Garhwal Region.

**2.2-** The plants pointed out by local inhabitants were collected, identified botanically with the help of flora- Forest flora of the Chakrata, Dehradun and Saharanpur forest Divisions Uttar Pradesh (Kanjilal, 1928), Herbaceous flora of Dehra Dun (Babu, 1977), Flora of District Garhwal : North West Himalaya (Gaur, 1999), Flora of Chamoli (Naithani, 1984 & 1985), Collected plants were preserved in the herbarium of Govt. P.G. College Kotdwara (Garhwal).
